Jordan

Petra

1. The inscription is located in Wādī Mūsā, near to the Siq of Petra, in front of the Obelisk Tomb.\(^1\) It is a text, approximately 3.50 metres in length, deeply carved in a sandstone that is perpendicular to the stream, 5 m above the ground and placed at the opening of the cave room BS23;\(^2\) it is written in large letters, which were perhaps originally ochre in colour (Milik 1976, 143). Unfortunately, the text has been mostly ruined. The text consists of five lines, the first three in Nabataean, the other two in Greek. (Plate I, no. 1)

Dimensions  length 3.50 m

Dating  1st CE (40-70 CE?)

Bibliography  Milik 1976, 143-52; SEG 27 no. 1012; Milik 1980, 12, fig. 9; Zayadine 1984, 64-5; Zayadine 1986, 221-2; Healey 1993, 243-4; IGLS 21,4 no. 54; Quellen, 222-4; Atlas, MP5

---

1 The town, in ancient times known as Gaia, is located in the Maʾān Governorate in southern Jordan. It is called Wādī Mūsā probably because according to tradition the prophet Moses passed through the valley and struck water from the rock for his followers (Num 20,10-11). The Nabataeans built channels that carried water from this spring to the city of Petra.

2 Atlas, MP5, 164.

Commentary

Line 1. The term \(mqb[r']\) is attested in inscriptions from Sī’, in Ḥauran (RES no. 805; PPAES IVA no. 2), although it is rarely used in comparison to \(mqbr't\) or \(qbr'\) (Milik 1976, 144; DNWSI, 678). The masculine form of the noun means ‘burial, tomb’\(^5\).

The noun \(mqbr'\) possibly identifies a place, a setting, \(s\)t\(r\)ict\(u\) \(s\)en\(s\)u, \(s\)uitable for the burial, i.e. a grave instead of a complex of tombs; in addition, the expression, with the demonstrative \(dnh\) ‘this’,\(^6\) could prove that the monument was located not far from the place in which it was engraved.\(^7\)

After the verb \(bnh\) ‘to build, to construct, to erect’ there should be the name of the author, but only the Greek text reports it, that is \(bd\)\(mn\)\(kw\) = \(Μβ\(δ\)\(ο\)μ\(α\)ν\(κ\)ος as suggested by Milik,\(^8\) rather than a possible \(bd\)'\(mn\)\(w\) = \(Μβ\(δ\)\(ο\)μ\(α\)ν\(ο\)ς,\(^9\) with the latter being too short for our in-

---

\(^3\) From hereon the Greek text will be presented without \(s\)p\(r\)i\(t\)i and \(a\)ccents.
\(^4\) He is Malco. See commentary.
\(^5\) The plural form \(mqbryn\) is present in CIS II no. 350.
\(^6\) This regards a common custom in Nabataean epigraphy; the demonstrative placed before the subject assumes the sense of subject pronoun of a nominal clause, while put after it becomes a demonstrative adjective (Cantineau 1930-32, 2: 58). Such a construction, with a postponed demonstrative, is also attested in two inscriptions from Umm al-Jimāl. Cf. RES no. 2064; PPAES IVA no. 42.
\(^7\) Atlas, MP5, 164.
\(^8\) Milik 1976, 145.
\(^9\) The name also appears in the bilingual painting, no. 6, from the sacred place of Rām.
This personal name is made up of ‘bd ‘servant, slave’ and mnkw (= mlkw) ‘Malichos’ (the name of a Nabataean king) and it occurs other 16 times in the Nabataean onomastics. It is worth bearing in mind that the form mnkw (= mlkw) reflects the phonetic transition l > n, a typical Nabataean feature observed in many names. The epitaph might have been carved during the reign of Malichus II (39/40-69/70 CE), even though among the Nabataeans the deification of kings was only witnessed by Obodas I (96-85 BCE). King or pseudo god names as ‘bdmnkw, ‘bdḥrtt or ‘bdrb’l would be bestowed upon sons of the king; as a consequence, if we assume that the inscription was drawn up during the reign of Malichus I, it would mean that the Greek linguistic influence occurred in Nabataea starting from the middle of the 1st century BCE.

At the end of the line ‘kys = Gr. Αχαῖος appears. This name is recorded 4 times. It is a Greek name having the shape Αχις, Αχιος and Αχαιός.

Line 2. At the beginning there is the name of the author’s grandfather, šly. The root should come from Arabic salā ‘to neglect, to forget’, also ‘to console, to comfort’.

This name is widely used in Nabataean although it is not reported in the Greek part of the inscription. In Greek it has the form Συλλαίος in the bilingual inscriptions from Miletus (no. 49) and Delos (no. 50). The father’s name of šly is ‘tyhw. If the reading is correct we are dealing with a rare name in Nabataean onomastics; it may be an adjective of pe’il form (productive in Arabic) from Arabic ‘utiha ‘to become stupid’, ‘idiot, dumb’ > ‘atīh. It is an epithet that indicates “a man addicted to annoying another and mimicking his speech” or

14 Atlas, MP5, 164.
15 Milik 1976, 146.
16 Negev 1991, 81. In Quellen, 222-3 we read Ακις, a name also found in Egypt (SB I no. 3311).
17 Wuthnow 1930, 30. Αχαιος is more frequent (Pape 1911, 184).
18 Lane, 1417.
20 Wuthnow 1930, 113. Another form is Σολλου (Wuthnow 1930, 170).
21 Negev (1991, no. 949) suggests that it is a diminutive form < ‘thw.
22 Lane, 1951.
better “intrigant, qui rapporte les paroles des autres dans le but de nuire” as Kazimirski (1860, 169) points out. On the contrary, Milik (1976, 147)\textsuperscript{23} vocalizes and reads ‘utēh (< fu’ayl in which there is the diphthong ay > ë).

At the end of the line we read ‘ḥrh ‘his descendants’, ‘qui est après, postérité’\textsuperscript{24} with the singular masculine pronoun -h. Probably it is of Lihyan origin or a loanword (cf. CIS II no. 197), even though in Lihyan the substantive is employed along with words bearing a more detached meaning.\textsuperscript{25} In Nabataean this meaning, expressed by the root ‘hr ‘to come after, to follow, to be late’, is more general. After that, there is w’ḥr and at the beginning of line 4 we encounter the plural masculine suffixed pronoun -hm meaning ‘their descendants’. In Nabataean epigraphy it is rather unusual to break graphically a syntagma into two parts.\textsuperscript{26}

Line 3. After the suffixed pronoun we read the expression l’lm ll-\textsuperscript{27}myn, literally ‘for the eternity of the centuries’, therefore ‘for ever and ever’, ‘in saecula saeculorum’. In the middle of the line the reading is difficult. We may reconstruct a possible šnt ‘year’ that generally goes with the name of a king in order to date the carving of the inscription. Indeed, at the end of the line we find the name lmnkw, referring to the Nabataean king Malichus I or II, while the absence of the title: mlk’ mlk nbtw ‘the king of the Nabataean’s kings’ is unusual, because it commonly follows the sovereign’s name.

At the end of the line the phrase bḥywhy comes into view meaning ‘during the course of his life’. After the substantive ḥyw there is the masculine singular possessive pronoun -hy. In Nabataean, as in Biblical Aramaic, Egyptian Aramaic and Syriac, the singular masculine suffixed pronouns -h and -hy (in Nab. -w and -hw are also used) differ in use; -hy is generally employed before nouns ending in -w or -y.\textsuperscript{28} The origin of the two suffixes is difficult to establish.

Line 4. The letters are in part ruined, but the reading does not seem to be difficult to reconstruct. The name Αβδομανχος and the patronymic Αχαιου appear, ‘Abdomanchos (son of) Achaios’. At the end of the line we see the sequence -οιης- that we interpret as [επ]οιησ [ε] ‘he built’.

\textsuperscript{23} Contra Quellen, 222-3 and Nehmé (Atlas, MP5, 164).
\textsuperscript{24} Cantineau 1930-32, 2: 60.
\textsuperscript{25} Milik 1976, 147.
\textsuperscript{26} Milik 1976, 147.
\textsuperscript{27} In the matter of Malichus, his title is also absent in another inscription, in CIS II no. 222, in which we read: bšnt 17 lmnkw ‘in the year 17 of Malichus’, quite akin to the reconstruction of the sentence contained in our epigraph.
\textsuperscript{28} Cantineau 1930-32, 2: 54-5.
\textsuperscript{29} See Brockelman 1908, 312 for an explanation.
Line 5. The articles τό and τοῖς, of the nouns μνημεῖον and υἱός, are omitted by the stone-cutter (due to the insufficient space?30). As regards the former, the term comes from the verb μιμήσκω ‘to remind, to put in mind’31 < μνήμη (Dor. μνάμα) ‘memory, souvenir’, but above all ‘grave, burial’,32 just as μνημεῖον (Ion. μνημήιον) indicating the ‘memorial’, the ‘grave’.33 Moreover, the substantive would be a diminutive observed in burial memorials in order to highlight the importance of μνήμα and certain derivatives in the funeral lexicon.34 According to Healey (1993, 243), the term should be reconstructed as μνημόσυνον ‘remembrance, memorial’ also referring to a commemorative funeral memorial, that is less important than a grave.

2. The inscription is carved on a white marble and was found in a robbed tomb. The epigraph, which is an incised graffito, consists of two lines. In the first line, in which two Nabataean words appear, there seems to be a fracture in the stone, while the second line is not damaged.35 (Plate I, no. 2)

2) Agare

30 As Milik suggests (1976, 147).
31 LSJ, 1135.
32 LSJ, 1139. Cf. Euripides, Phoenissae 1585: ὡς ὥρα τάφου μνήμην τίθεσθαι ‘it is time we thought of their burial’.
33 Cf. Plato, Res publica, 414α: τάφων τε καὶ τῶν ἄλλων μνημείων μέγιστα γέρα ‘the supreme honours of burial-rites and other memorials’.
34 Chantraine 1968, 703.
35 Bowersock (2015, 123) asserts that: “the stone looks abraded, and […] there was a second word of Greek to match the second word of Nabataean”.
Commentary

The graffito reports a woman’s name, hgrw, which is well-known in tNabataean onomastics and considered as equivalent to the Greek Αγαρη. This Greek form is also well-documented. The second Nabataean word, slyt’, is problematic because the first two letters present difficulties in reading; if they were šl- the word might represent another form of the name šly. John Healey proposes reading tlyt’ ‘the girl’, however his hypothesis is rejected by Bowersock who asserts that there is no reason: “why a female name would need to be qualified in this way”. As regards its etymology probably slyt’ derives from the Arabic root slw ‘to neglect, to forget’, also ‘to console, to comfort’. Hgrw may be described as a consolation or a comfort. But this is only a suggestion since, unfortunately, we do not have a parallel Greek word after the mention of Αγαρη. Therefore, it seems to be possible that whoever carved the graffito preferred to record in Greek only the name of the woman without writing anything else.

3. This stone was found among the ruins of Petra. The stele is damaged on the left part, while the right side seems to be well-preserved. The six-line text, is less legible on the left side and we can only reconstruct a few lines. It is mainly in Greek except for the last two lines where some illegible signs in Nabataean script appear. (Plate II, no. 3)

1) [---] listener Du-
2) [---] s Olfios
3) [---] of
4) [---].

Commentary

Line 1. The text is illegible at the beginning of the line; Sartre (IGLS 21,4 no. 28) reconstructs θεῷ ἁγίῳ ‘to the Holy God’. After this expression there is a sequence of letters, [---]πηκοω, that is simply interpreted as ἐπηκόου ‘listener, hearer’ referring to the god who listens to the prayers and grants them. Although the reading is uncertain, at the end of the line we see the letters δου- that probably form the first part of the God’s name Δουσαρης – Dusares.

Line 2. It is almost illegible up to the end where the name Ολφιος comes into view. We do not know if it refers to the author of the inscription; either way, the name probably derives from the Arabic root ḥlf. In Nabataean the name ḥlpw is found and it is compared with Arabic ḥalaf and Greek Αλαφος as Cantineau points out (1930-32, 2: 96). The general meaning is that of ‘successor’, also ‘enfants’.

The Greek restitution of the name highlights a probable syncope on the penultimate non-stressed vowel: ḥalp < *ḥalap. In addition, the Greek transcription would exhibit a final etymological -*i represented by i before the suffix -ος.

Lines 3-4. At the end of line 3 there is the plural genitive article τῶν, while in line 4 we reconstruct a supposed ἰδίων ‘of own’.

41 In Hauran (cf. PPAES IVA no. 19; RES no. 2048), in Hegra (modern Madain Saleh or al-Hiğr) and Hejaz (CIS II nos. 206, 209; JSNab nos. 53, 297); Cf. also al-Khraysheh 1986, 84. As regards Palmyrene, see PAT, 434 = Stark 1971, 22-3 and 88.

42 Cf. ICPAN, 198 ḥlf > ḥlf ‘ally, sworn friend’.

43 This appellative is frequent in Syria, Phoenicia (IGLS 5 no. 2250) and Hauran (PPAES IIIA nos. 90 and 185).

44 Kazimirski 1860, 1: 620; Negev 1991, no. 452. It is also possible that the root is related to hlywp (al-Khraysheh 1986, 62), name found in Sinai (CIS II no. 2973), that Cantineau (1950-32, 2: 86) renders into Arabic as hillalw ‘hirsute,’ hallawf ‘sanglier’. In the Negev, during the Byzantine period, the name Αλφιου-Αλφειος is recorded (Negev 1982, 40, no. 39:2) as it is in the Nessana papyri (Kraemer 1958, 67, PC21) and in those from Egypt dating back to the 6th-7th century CE (Preisigke 1967, col. 21).

45 See other names of Arabic origin like Αδιος = Nab. ‘dy registered at Umm al-Jimāl (PPAES IIIA no. 366) and Μονιος = Nab. mgni found in Hauran (Wadd. no. 2153).

46 IGLS 21,4 no. 28.
This inscription was found in the area of the monumental building of el-Deir and it was engraved inside the monument no. 465 on the south wall, to the right of the entrance, 1.30 metres above the ground and 1.90 metres away from the back wall. The epigraph is unrefined, presenting several complications in reading due to the fact that the wall is blackened by soot. The inscription is made up of five lines (if we also include the last two lines of the inscription) in which the Nabataean section is not placed in line 3, as Brünnow e Domaszewski (1904, no. 437) graphically reproduced, but to the right of the Greek sequence of line 2.

The shape of the aleph suggests that the Nabataean script here used goes back to a late stage of writing so we can date the inscription to the 1st century CE.

**Commentary**

Line 1. The term τὸ προσκυνήμα < προσκυνέω ‘to make obeisance to the gods or their images’ reveals the cultic character of the epigraph and probably constitutes a rare case of a *proskynema* found out of Egypt. According to Sartre (*IGLS* 21,4 no. 35) they belong to another text whose further parts have disappeared or perhaps were never engraved at all.

---

47 According to Sartre (*IGLS* 21,4 no. 35) they belong to another text whose further parts have disappeared or perhaps were never engraved at all.

48 *LSJ*, 1518.

49 The practice of προσκυνήμα was born in Egypt towards the 2nd century BCE in a hellenized environment characterized by a religious syncretism where both Greek and
Line 2. We read AMIΨMI, but the sequence of letters cannot be interpreted. On its right side there is the Nabataean text: dkyr [...]n’ bṭb in which the first element, dkyr, denotes the remembrance of someone (it is a common formula in the commemorative Nabataean epigraphy), although we cannot read the name of the remembered person. After a space, consisting of 3 letters, we glimpse a l preceding the n in order to obtain [...]ln’, probably the final part of the name of who is remembered. At the end there is the expression of greetings bṭb ‘in good’.

Line 3. Sartre (IGLS 21,4 no. 35) reads -ομου, omitted (or badly read?) by Domaszewski who connected it to the previous sequence AMIΨMI.

Lines 4-5. The phrase τὸ προσκύνημα occurs again, while in the last line we read in Nabataean šlm ‘peace’.

5. The inscription was found at Little Petra, also known as Sīq al-Bārid, and it was engraved on a rock near a temple that could have been an ancient shrine.50

Text and translation

1) šlm hbwls
2) Αβολος

1) Peace! Habōlos
2) Abolos

Commentary

The name hbwls seems to be of Greek rather than Nabataean origin51 considering the -s ending that recalls the suffix of the nominative case -ος. Furthermore, Αβολος is attested in an inscription from Asia Minor;52 with two other forms, Αβόλλας and Ἀβολλα, being attested only by Pape.53

Egyptian divinities were associated. For a detailed study, cf. Geraci 1971.

53 Pape 1911, 3. In the volumes of the LGPN and in the database of the Searchable Greek Inscriptions of The Packard Humanities Institute the two names are not present.
Jabal Kharazah Ratamah

6. The two inscriptions were found at Jabal Kharazah Ratamah, in the Wādī Talājah, at a dozen of kilometres east of al-Qwayrah between Petra and Aqaba. The only fragment in Greek script is engraved on a cistern-facing rock; it carries the name of the owner, while a short distance from it there are the two Nabataean inscriptions.

In the area, in the clefts on the western side, five Nabataean dams have been discovered. Among the installations the southernmost is the best. The short Greek part reports only a name, Ηλεος, carved in carefully cut lettering and related to the owner of the cistern.

The two Nabataean texts are hammered and not cut into the rock. The first of the two lines, is situated 4.50 metres in front of the dam and 3.50 metres above the riverbed; the second line, badly weathered, is placed below the first one.54

Dimensions 1st Nabataean inscription 80 cm × 16 cm, height of letters 6 cm; 2nd inscription length 105 cm, height of letters 8 cm

54 Milik 1958, 250.
Commentary

Inscription A

Line 1. The name of the addressee of the manufact, šb’, appears denoting the ‘lion’. This term is present in Arabic sab’ meaning ‘wild beast, lion’, even though in North-West Semitic languages this root primarily means ‘to be sated’, also ‘seven’.

The second name that comes into view is ’lh = Gr. Ἰλεος, the father of šb’; the Greek form furnishes the presumable Nabataean vocalization ’ẹleḥ/, a variation of the same transcription that identifies ’īlah/ ‘god’.

Successively, we find the verb ’yd ‘to be set up, to be arranged, to be prepared’, the passive participle of pe’il, that is also attested in Arabic ’atuda (= Heb. ’td) ‘to be ready, to be prepared’ representing a secondary formation from ’adda ‘to count, to enumerate’, hence the form i’tadda ‘to consider, to believe, to evaluate’ (> ista’adda), ‘he considered, prepared himself’.

Line 2. We encounter the name ḥrtt ‘Aretas’, Aretas IV Philopatris according to his epithet mlk nbṭw rḥm ‘mh ‘king of Nabataeans who loves his people’; in addition, the mention of the year of the reign of Aretas ’rb’yn wḥdh ‘41’ suggests that the epigraph was carved in 32 CE.

55 It is also found in the Nabataean onomastics from Sinai in the form of šb’w (CIS II no. 891) and in Greek transcription, Σαβαος, in Hauran (Wadd. nos. 1990, 2101). It is also registered as a compound name šb’w llāhi (CIS II no. 370; RES no. 1472) like Arabic sab’u llāhi and Hebrew ārî‘ēl (cf. Cantineau 1930-32, 2: 148). Cf. al-Khraysheh 1986, 170.

57 See DNWSI, 1101-2. It appears in the Bible as a personal name šib’ā (1Sam 20,1 and 1Chr 5,13). In Arabic this semantic passage from ‘seven’ to ‘lion’ is explained, according to tradition, by the fact that the root has assumed the meaning of ‘place in which mankind shall be congregated on the day of resurrection’; this is related to the story of a shepherd who, while among his flock, saw a wolf that took a sheep, and ran after the wolf, rescuing his sheep. Whereupon the wolf said to the shepherd: man lahā yawma l-sab‘i? ‘Who will be for it (namely a sheep or a goat as defender) on the day of resurrection?’ As Lane explains: “who shall be for it on the occasion of trials, when it shall be left to itself, without pastor, a spoil to the animals of prey” (Lane, 1296); as a result the animal of prey: “has a fang and tearing claw or canine tooth with which it attacks and seizes its prey as does the lion” (Farid 2006, 378). In the Koran we find the sentence wa-mā ’akala l-sab‘u ‘what an animal of pray has eaten’ (V, 4).

58 Another form is Ἰλεος (Wuthnow 1930, 51). The other attested Greek shapes, Ἀλειας, Ἀλεου (in Wadd. nos. 2005, 2520), diverge compared with our inscription. Cf. also Pape 1911, 53.

59 ’lh is recorded as a personal name in PPAES IVA nos. 13, 14; RES nos. 2043, 2044. Its meaning comes from Arabic ’alaha ‘to worship’ (Negev 1991, no. 88). In Quellen, 283 it is read Alih. In Palmyrene ’lh is considered as a hypocoristic name (PAT, 430 = Stark 1971, 4 and 68).

60 Cantineau 1930-32, 1: 75. See also DNWSI, 897.

61 Klein 1987, 490; Lane, 1969-70.
At the end of the line there is yq’, probably the name of the author. According to Milik (1958, 251) it is a hypocoristic name from the root yqh- (with the variant wqh), very frequent in the north and south Arabian onomastics of the 1st millennium BCE Although the root is less used in Hebrew, yqh ‘to protect, to obey’

62  > proper name Jāqeh (Prov 30,1) < yiqaḥāh ‘obedience’ (Gen 49,10; Prov 30,17), Akk.  utaqqu ‘to obey’,

63  it is productive in Arabic in which the verb waqā ‘to preserve’ (waqīya ‘to be obedient’) is used, as the sentence waqāhu lllahu l-suū’ ‘God preserved him from evil’

64  demonstrates. The name could be translated as ‘pious’.

Inscription B

In the last short one-line inscription there is twds, the name of the other son of ‘Eleh, that derives from Greek Θευδᾶς (Θουδᾶς).

65  The fact that a Nabataean bears a Greek name would represent the proof of the spread of Hellenization, at least superficially, into the Nabataean military centres during the reign of Aretas IV.

Ḫismā-Wādī Ram

7. It is a painting on a plaster that covered the inner wall of the sanctuary of the goddess Allat situated in Wādī Ram. Wādī Ram, also known as The Valley of the Moon, is a valley cut into the sandstone and granite rock in southern Jordan 60 km to the east of Aqaba. There are about 30,000 inscriptions in the form of rock paintings and graffiti realized first by the Thamud and then by the Nabataeans who installed in Wādī Ram in the 4th century BCE They lived peacefully along with the Thamud worshipping the same deities, including Dūšarā. Besides paintings and graffiti, the Nabataeans also built temples. The Greek text is located on the left part of the inscription, while the Nabataean is on the right side.

63  KAHAL, 263.

64  Lane, 3059.

65  See LGPN I, s.v., “Θουδᾶς” is only encountered in Crete (IC II, 46) and Delos (IG XI 2 no. 203 A:65). It is a name recorded in the Near East as the New Testament shows, mentioning a certain Israelite Theudas (Acts 5,36), the leader of a revolt who was subsequently killed; also Josephus (AJ 20.5.1) cites the figure of an instigator (Gr. γόης ‘impostor, swindler, charlatan’) who led the masses against the Ancient Roman eques and the procurator of Iudaea Province, Cuspius Fadus, but afterward he was captured and decapitated. The Acts speak about an event that happened before 37 CE, while according to Josephus it took place at the end of the mandate of Fadus, between 45-46 CE.

The builder.

**Commentary**

The author of the painting, ‘bd’mnw,67 is known in a proskynema found near the sanctuary, in which he is mentioned along with the names of other builders who made the sanctuary.68 According to Milik (1976, 145) he is the same architect who engraved his name in a Thamudene graffito found in the same region in the form of ‘bd’mn;69 moreover, this name would be the only proof in the Thamudic epigraphy.70

As regards the onomastics, the real name of the author of the painting is Ουαβαλας,71 in line 1, while the nickname, pronounced ο κα[ι] (= Nab. mtqr’, sing. masc. part. of etpe’el ‘named, nicknamed’ < qr’), is the above-mentioned ‘bd’mnw. The Greek transcription of Ουαβαλας recalls the Nabataean name in line 4, whb’ly, that is a

---

66 The transcription is that of Milik 1976, 145, no. 5.
68 The inscription was discovered by R. Savignac (1933, 418, no. 9). Cf. also the inscription no. 8.
69 Harding, Littmann 1952, no. 57 A.
70 IGLS 21,4, 177.
71 This name, transcribed in Greek in this way, is found at Umm al-Jimāl (cf. IGLS 21,5.1 nos. 423, 424 and PPAES IIIA, 3 no. 476). Other forms are: Ουαβαλας, Ουαβαλλος, Ουαβελου, Ουαβηλος (Wuthnow 1930, 91).
theophoric composed of whb ‘gift, present’ and the name of the deity.\footnote{Negev 1991, nos. 337, 338; al-Khraysheh 1986, 67.}

The name \textit{Αβδομανος},\footnote{It is used in Greek as \textit{Αβδομανος} (Cantineau 1930-32, 2: 126; Wuthnow 1930, 8 and 154); it still survived in the Negev during the Late Roman Period, as a Greek inscription found in the northern part of the acropolis of the city of Avdat/Oboda shows (Negev 1982, 17, no. 3).} which corresponds to ‘\textit{bd’mnw}, is made up of ‘\textit{bd} ‘servant, slave’ and the root ‘\textit{mnw}, and it was recorded in Sinai, meaning ‘rester dans (un lieu)?’;\footnote{Cantineau 1930-32, 2: 132; ICPAN, 441: ‘\textit{mn} ‘to remain’.} Ar. ‘\textit{amana} ‘to remain, to stay in a place’.\footnote{The hypothesis of Littmann (\textit{PPAES} IVA, 79) according to which the second element ‘\textit{mnw} is identified with the Egyptian god Amun is hard to support.} The Greek shape of the name probably shows the assimilation of the Aramaic nominative mark -o (=*u) into the second element of the name -ομανος; this fact identifies the shape of \textit{Αβδομανος} as a result of a contemporary transcription compared with the most archaic \textit{Αβδοομανου} recorded at Ḏībān,\footnote{IGLS 21,2 no. 183 and Dalman, 2: no. 98.} in which the second -o is the nominative mark: */‘aḇdo-’oman/. The name ‘\textit{bd’mnw} is well documented in Hauran.\footnote{\textit{PPAES} IVA, no. 79; RES no. 2100.}

The grandfather of \textit{Ουαβαλας} is a certain \textit{Αιαλος} who appears in line 3 in the Greek section of the inscription. The equivalent in Nabataean is ‘\textit{ylw} mentioned in the last line.\footnote{This name is encountered at Hegra and in Hauran. Cf. \textit{JSNab} no. 344.} The root is of semitic origin having a correspondence to the Hebrew ‘\textit{i’llay}, a personal name of one of David’s heroes who gave him strong support in his kingdom.\footnote{1Chr 11,29; Cf. \textit{DGes}, 954 and \textit{KAHAL}, 402.} It means ‘the higher’ < ‘\textit{i’}, Ar. ‘\textit{ālin} < ‘\textit{aliya ‘to be high’. Cantineau (1930-32, 2: 129) connected the Nabataean root to the Arabic \textit{gāyyāl} or ‘\textit{ayyāl}.\footnote{Cf. also Negev 1991, no. 882. al-Khraysheh (1986, 139) thinks it is \textit{Gaiyāl ‘killer’, ‘Menchelmörder’. In addition, see ICPAN, 451.} The former indicates a wide, ample space,\footnote{The form \textit{gāyyāla referred to a woman obtains the meaning of ‘she is tall’.} while in the Koranic context it describes the following: “such as one judges to be of little extent, through it is for extending’;\footnote{Lane, 2319.} the latter takes on the meaning of: “that inclines from side to side in gait and is proud, haughty or self-conceited, therein’.\footnote{Lane, 2213.}
The Nabataean text provides the most information about Αιαλος, the son of ‘bd’bdt, the latter omitted in the Greek part. In turn, was the son of qynw, as we can read in the last line of the Nabataean inscription. According to Milik (1976, 145) and Cantineau (1930-32, 2: 142), the root relates to Arabic qayn (pl. quyūn) meaning ‘forgeron, mineur, fondeur’ < qāna ‘to forge, to adorn’.

At the end of the two texts we read the ethnic Φαινήσιος, Nabataean pyny, that indicates the ancient town of Faina in Hauran, corresponding to the modern village of al-Mismiyah, considered the μητροκωμία (lit. ‘mother village’ < -κώμη) of the ancient Trachonitis, today called al-Lajāh (lit. ‘the refuge’), a region to the south of Syria and to the east of the Jordan river.

The ethnonym is recorded in several texts. The site, well-documented in ancient topographies, was probably a strategic place to stop over and successively to conquer Kanatha or Bosra.

In the region of Ḥismā, where it is unlikely that the Greeks lived, the usage of Greek as a written language, apart from the other Semitic languages and Latin of Roman soldiers, was of considerable importance; this is because it was very widely known and the sanctuary of Iram was much visited.

It is difficult to date precisely the inscription on the basis of the steps in the building of the temple, and it would be impossible to identify when the plaster was applied and then painted. Instead, in Milik’s view (1976, 145), we may date the inscription to the mid-

85 Proto-Afro-Asiatic *ḳVயVyN- ‘forge’ (HSED no. 1629). Negev (1991, no. 1025) translates “qain, smith, artisan”, in relation to Greek Kαινος found on papyri (Wuthnow 1930, 61 and 164). The root qynw seems to have also the meaning of a female name, as some inscriptions from al-Ḥiǧr prove (CIS II nos. 205, 207), that al-Khraysheh (1986, 160) vocalizes as Qainā and translates as ‘Sklavin, Sängerin’. The meaning of ‘slave’ may be noticed in the epigraphs from al-Ḥiǧr and Sinai (cf. CIS II nos. 324, 550, 551, 1239, 1699 et passim). The name is also recorded in pre-Islamic Arabic, see ICPAN, 492.
86 At almost 50 km south of Damascus.
87 LSJ, 1130.
88 It is mentioned in Luke 3.1.
89 In IGR III no. 1119 in a letter of the governor of Syria to the inhabitants of the town: Φαινήσιος μητροκωμία τοῦ Τράχωνος. Cf. also IGR III nos. 1120, 1123; PPAES IIIA no. 800. In the West it is found in Italy, in Rome and Aquileia, and in Salona, in modern day Croatia. Cf. Feissel 1982, 337-8.

**Commentary**

The stone comes from the hallway of the temple of the goddess ‘Allat and it is related to the Nabataean *proskynema*, as it is reported by R. Savignac (1933, 418, no. 9), in which the builders of the temple are mentioned: *dkrt ‘lt bny’ pr” | wtymw whdnw w’bd’mnw bṭb* ‘that ‘Allat may remember the builders Far’ā | Taymó, Ḥaṭanō and ‘Aḇd’omanō, in good’.

As regards the Greek section of the inscription, we find the mention of the architects, οἱ οἰκοδόμοι, after the letters ΚΑΙΟΠΙ that may form the beginning of a proper name or be the indication of another category of artisans: καὶ οἱ τ[---], which may be ταμίαι or τέκτονες.\(^9^6\)

**Commentary**

This inscription reports a theophoric name made up of the terms *gd* and *ṭb* meaning ‘the (god) Gad is good’, well-known in the Nabataean epigraphy and, more generally, in the Aramaic.\(^\text{98}\) The root *gd’* comes the name of a deity to be identified with Ἡ Τῦχη – ‘The Fate’ of the Greek divine context. It is found, in the shape of ḡdṭb, not only in Petra, but also in Hegra.\(^\text{99}\)

The worship of Gad, who became the god of Fate (Lat. *Eutychus*\(^\text{100}\) < Gr. Εὐτύχης), was widespread in Hauran.\(^\text{101}\) In fact, several sanctuaries, called Τῦχηα or Τῦχαια, were built\(^\text{102}\) becoming Bayt Gadā. The Syriac poet Jacob of Serugh (451-521 CE) in his *Homiliae* (Syr. mem-

\(^{97}\) *IGLS* 21,4, 154.  
\(^{99}\) *CIS* II no. 236; *RES* no. 1167.

103 Clermont-Ganneau 1898b, 81.

104 Gesenius 1846, 157.

105 In the Palmyrene epigraphy Gad is rendered into Τύχη (cf. VIS nos. 3, 95; PAT, 433, 352 = Stark 1971, 13, 81). In Punic it is noticed in the inscription of Nora, Sardinia (4th-3rd c. BCE): \textit{lrbt lntn pn b‘l wgd} ‘Alla Signora, a Tanit, volto di Baal, Fortuna’ (Amadasi Guzzo 1990, 73, no. 3) and in the inscription of Ibiza (2nd c. BCE): \textit{lrbt lntn ‘drt whgd} ‘To the Lady, to the powerful Tanit and the Gad’ (KAI no. 72); see also Krahmalkov 2000, 136-7. The root gdy is generally attested in Aramaic and ‘mgd in South Arabic. For a close examination of the meaning that it assumes and for its presence in the Semitic languages, cf. DNWSI, 212-3. In the Hatraean epigraphy it is recorded in the form of g(n)gδ (Beyer 1998, 147). Moreover, it survives as \textit{eterogram} in Middle Persian (or Pahlavi) as GDE, read xwarrah ‘lucky’ (MacKenzie 1986, 96) and as a loanword in Ge‘ez gadd ‘lucky’ (Leslau 1991, 180).

106 Cf. Pape 1911, 637. In the Wādī Haggag, Sinai, the name is written as Γαδός (Negev 1977, no. 184).

107 CIG III, 5175. In Latin it is transcribed L. \\textit{Vibio L. [F.] Cattabo}. See SEG 9 no. 247 with gamma (Gattabos).

108 It is mentioned in the Ancient Testament as Zo‘ar (Gen 14,8, previously called Bela), and it was part of the late Roman province of \textit{Palaestina Tertia}.
As regards al-Naq’ cemetery, it was probably predominantly of Jewish ritual. Indeed, there are tombstones written in Aramaic, Hebrew and Greek, as well as a Hebrew-Greek bilingual,\textsuperscript{109} which belonged to Jewish, Christian and pagan people. The inscriptions of deceased Jewish people are dated according to the cyclical agricultural calendar of seven years bearing Jewish symbols; meanwhile the Christian inscriptions are dated starting from the Lord’s Day and have crosses as symbols.\textsuperscript{110}

The Greek part is shorter than the Nabataean, which contains more information about the deceased woman and her date of death. (Plate III, no. 1)

\textbf{Dimensions}  height 23 cm; length 40 cm; thickness 13 cm

\textbf{Commentary}

In line 1 there is the name of a woman, Ἰσμεηλη; its Nabataean transcription, ῥμ’ yn, is intriguing. The Greek masculine form, Ἰσμαηλος, is attested in two epitaphs from Jericho,\textsuperscript{112} while the name Εσμαηλος is found in a funerary inscription from Busān, in Hauran, dating to

\textsuperscript{110} Ilan 2012, 30. It is also true that some inscriptions are dated on the basis of the era of \textit{Provincia Arabia}, whereas other inscriptions in Greek have no date.
\textsuperscript{111} In the \textit{editio princeps} the authors only report a translation of the Nabataean text without its transcription, which I myself provide below (see the bibliography).
\textsuperscript{112} Hachlili 1979, 34-5; \textit{IPT} Ib 4b-c no. 10 and comment on pp. 48-9; Rahmani 1994, 243-4; \textit{SEG} 31 nos. 1407.6. See also Pape 1911, 573.
the middle of the 4th century CE (341/2).\textsuperscript{113} ‘šm’yn is probably new in the Nabataean onomastics, since it is not encountered elsewhere in Nabataean, Palmyrene, Hatraean or in pre-Islamic Arabic.\textsuperscript{114}

The patronymic Αβδαρετος represents the Greek transcription of the Nabataean ‘bdḥrtt. In the funerary epigraphy from Gūr al-Ṣāfī, it appears in the variant of Αβδοάρθα\textsuperscript{115} (the genitive of Αβδοάρθας), Nabataean ‘bdḥrtt, but here the Nabataean name does not correspond to the Greek. Instead, in fact we find ‘bšlm. Presumably Αβδαρετος was called ‘Abdaretas in the Greek speaking environment of Zoar, while among Nabataean speakers he was known as ‘Abušalem which is a name given to him after the birth of his first son who was called Šalem (< šlm ‘peace’). In fact, he is traditionally cited as the father of a firstborn son according to the Arabic practice, still in use today: ‘b ‘father’ + son’s name.\textsuperscript{116} The name ‘bšlm is recorded at Hegra as well.\textsuperscript{117}

At the end of line 1 we read the author’s name Ζωίλος, usually used in Greek,\textsuperscript{118} deriving from the word ζωή ‘life’,\textsuperscript{119} and transcribed as zyls in Nabataean, line 3. The first mention of this name in Palestine during the Hellenistic period is found in the Greek-Aramaic votive bilingual inscription of the 3rd-2nd century BCE from Tell Dan\textsuperscript{120} and in an amphora from Rhodes.\textsuperscript{121}

The patronymic of Zoilos is Αλεβος, a Semitic name that corresponds to Nabataean ‘lbw, in line 3.\textsuperscript{122} The root probably comes from Arabic ǧālib ‘winner’ < ǧalaba ‘to win, to subdue, to conquer’\textsuperscript{123} and is present in the Aramaic ‘lb as well (Syr. ‘eleb ‘to exceed, to surpass, to cause wrong, to oppress’\textsuperscript{124}). Negev’s assumption (1991, no. 886 as first hypothesis) of an Arabic origin ‘alib ‘to become thick or coarse,

\textsuperscript{113} Wadd. no. 2247.
\textsuperscript{114} Cf. Cantineau 1930-32; al-Khraysheh 1986; Negev 1991; NABLEX. For Palmyrene and Hatraean cf. PAT; Stark 1971; Beyer 1998. For pre-Islamic Arabic see ICPAN.

\textsuperscript{116} IPT Ib, 127.
\textsuperscript{117} JSNab no. 313. Cf. also Negev 1991, no. 29.
\textsuperscript{118} It is above all employed in Greece. Cf. LGPN I, II, IIIA, IIIB, IV, VA, VB.
\textsuperscript{119} Cf. Pape 1911, 448.
\textsuperscript{120} Cf. SEG 26 no. 1684 with references and Arbeitman 1994.
\textsuperscript{121} Cf. SEG 8 no. 237.
\textsuperscript{122} It is used as a personal name in CIS II no. 363; Dalman, 2: nos. 4, 11, 14; RES nos. 1383, 1389, 1392.
\textsuperscript{123} Cf. Cantineau 1930-32, 2: 130.
\textsuperscript{124} Sokoloff 2009, 1099-100. The root is also found in Old Aramaic (DNWSI, 850). In Hebrew the verb ‘ālab ‘to be strong’ is employed in hiph’il form, he’ālīb, that means ‘to put to shame, insulted, umiliated’ (Gesenius 1846, 630).
rude’, ‘hard, tough’ is unconvincing. The Greek form Αλεβος is exclusively recorded in Hauran in funerary inscriptions.

In the last line of the Greek section in the substantive συνβίῳ < σύμβιος ‘wife, spouse, partner’ the ν, preceding ι, is not assimilated. This section ends with εὐνοίας χάριν that, in the same way as εὐεκέφιν, is a common expression used in honorific inscriptions in order to indicate the respectful attitude of the honoured person towards the community showing the honour; in the funerary context this phrase reflects the feelings of affection towards the deceased.

As regards the Nabataean part of the epitaph, in the first line we read the term npš’ followed by the author of the object.

In the last line there is the substantive ‘ntth (=<* ‘nth) ‘wife’, followed by the singular masculine suffix pronoun -h ‘of him’ = ‘his’. Here the assimilation of n to the following t should be expected in order to obtain ‘tt- (cf. CIS II nos. 158, 161, 194), but ‘ntt- is also attested somewhere along with ‘tt-.

The affection of the husband Zoilos to his dead wife is manifested by the adjective ḫbybt ‘be loved’, the singular feminine passive participle of pe‘il form from ḫbb ‘to love’.

The final expression byṛḥ sywn ‘in the month of Siwan’, the 9th month of the Hebrew calendar, should reveal the date of the engraving of the epitaph or the month when Ismeelé died.

125 Lane, 2126.
126 Along with Αλαβς, Αλεβος, Αλβος (Cf. Wuthnow 1930, 16 and 157). The latter is present at Tocra in Cyrenaica (LGPN I), at Ephesus (LGPN VA) and at Pinara, in Lycia (LGPN VB).
127 Wadd. no. 2053a; SEG 7 nos. 1144, 1156.
128 SEG 46 no. 2073.
129 IPT 1b, 126. Regarding references to the expression in Hauran see SEG 7 nos. 1072, 1086.
130 It is a noun frequently used in funerary Nabataean inscriptions (Cf. for instance CIS II nos. 159, 169, 195, 191, 194, 352, 353, 465 et alia) and it may have several meanings. In some inscriptions it is translated as ‘tomb’ or ‘gravestone’, while in other cases it refers to ‘soul, life, person and body’ (for the employment, the meaning and the occurrences of the name cf. DNWSI, 744-9). In Nabataean other terms are employed to indicate the tomb within a stylistic and architectural context and, compared to other regions, the term npš’ has the same meaning both at Hegra and Petra, and in Hauran and in Sinai (Abdelaziz-Rababeh, 2008, 182). Other words meaning ‘tomb’ are, for instance, mqbr’, qbr’, kpr’ (respectively in CIS II nos. 350, 184 and 197 to quote only three examples), while ‘m’ (CIS II no. 173) represents the ‘sarcophagus’, a ‘little case’, an ‘ossuary’, gwḥ’ (CIS II no. 211) a ‘burial niche’, ẓryḥ’ (CIS II no. 213) a ‘niche inside of a tomb’, and wgr’ (CIS II no. 205) a ‘cavern in a mountain’.
131 For the occurrences of the possessive suffix see Cantineau 1930-32, 2: 65.
132 Cantineau 1930-32, 1: 44-5; PPAES IVA no. 82; RES no. 2103.
Madaba

11. The epigraph was found at Madaba, a town located 30 kilometres south-west of Amman in Jordan. The inscription is an epitaph and is engraved on a square stone whose surface is rather ruined; nevertheless, the first editors had no difficulty in deciphering the text. (Plate III, no. 2)

Dimensions height 53 cm; length 43 cm; inscribed surface 51 cm × 39 cm; average height of the letters 3 cm

Dating 2nd CE (108-109 CE)

Bibliography Milik 1958, 243-6, no. 6; Milik 1980, 44-5; SEG 20 no. 494; IGLS 21,2 no. 118; Quellen, 212-3

133 The Moabite city of Mêdəba mentioned in the Bible (Num 21,30; Josh 13,9) was one of the settlements divided by the twelve tribes of Israel during the Exodus. Its name also appears in the Mesha’s stèle (CNSI, 1-2) that was built around 850 BCE by the will of the Moabite king Mesha to commemorate his victory over the Israelites. It was conquered by Alexander the Great and ruled by the Seleucid dynasty. During the Seleucid reign, the town fell under the rule of the Ammonites, Israelites and finally it was part of the Nabataean realm. In 106 CE it was annexed by the Romans and flourished, even though it was not of primary importance.
Commentary

Line 1. The incipit is similar to that of the inscription on the tomb of Itaybel, a witch of Madaba, and her sons, which was built in 37 CE.\(^\text{134}\) The author clearly distinguishes \textit{mqbrt}’ (the feminine form of \textit{mqbr}’ in no. 1) from \textit{npš’}. If the first term\(^\text{135}\) identifies a ‘sepulchre’, a ‘tomb’, the second refers to the ‘tomb built in the sun’, usually a pyramid-shaped tomb covered by a cube; in fact, as we may read in the inscription, it lies on the top of the deceased: \textit{dy \textquotesingle}l’mnh ‘which is on top of him’.

Line 2. Here the name of the author appears. It is a certain ‘\textit{bgr}, corresponding to Αβγαρ of the Greek text in line 7. It deals with a rare name among the Nabataeans inasmuch it is recorded in the northern Aramaic onomastics.\(^\text{136}\) This name derives from *\textit{bgdrt} (Ar. \textit{buḡrah}) ‘navel’.\(^\text{137}\) According to Milik (1980, 46), Abgar had the function of the guide of the Nabataean herd of horses and camels.

Line 3. We read the name of the author of the epigraph, ‘\textit{yšywn}, transliterated in Greek as Εἰσίων. As Milik points out (1958, 245), it is a name originating from the root ‘\textit{yšw} which is frequently used among the ancient Arabs (cf. Ar. ‘\textit{iūš} and Saf. ‘\textit{yš} ‘desperation, scepticism’ < ‘\textit{aīsa})\(^\text{138}\) and usually transcribed in Greek as \textit{Iāsoς} (RES no. 463).\(^\text{139}\) Here, the name \textit{Εισιων} simply reflects the Nabataean form of the name.

The patronymic \textit{mn’t = Movοcθου}, line 8, probably vocalized as */mono’at/,\(^\text{140}\) derives from the Arabic \textit{man’ah} ‘power, strength’ < \textit{mana’} ‘to ban, to prohibit, to forbid’,\(^\text{141}\) Heb. \textit{māna’}, Ge. and Am. \textit{mānānā}

134 CIS II no. 196; RES no. 674.

135 It is found in CIS II nos. 181, 196, 2033; PPAES IVA no. 106; RES no. 1090; in construct state \textit{mqbrt} in DM, II no. 18; RES 481. It is also present in Palmyrene (Cf. DN-WSI, 678).

136 Cf. al-Khraysheh 1986, 24. Pre-Islamic Arabic ‘\textit{bjr} (ICPAN, 9). Abgar was the name of several kings of the Osroene kingdom of Edessa, in Mesopotamia. There is a possibility that it referred to a title as August or Caesar did, rather than a personal name. (Cf. Ball 2001, 90). It is frequently encountered in Palmyrene (PAT, 429 = Stark 1971, 1 and 63).

137 Cantineau 1930-32, 2: 70; Negev 1991, no. 5. The name ‘\textit{bgd} was found in the graffiti from Sinai (CIS II no. 698), while the form ‘\textit{bgdr} in CIS II no. 750; in Greek Αβγάρος (Wadd. nos. 1984, 2046; PPAES IIIA, 2 no. 112; Pape 1911, 2; Wuthnow 1930, 7) and in Latin \textit{Abgarus} (CIS II no. 159).

138 ICPAN, 88: ‘\textit{ys}, \textit{lyās}, ‘\textit{yṣ}, ‘\textit{yṣn}.

139 Catineau 1930-32, 2: 61. The name ‘\textit{Iāsoς is found in Attica (LGPN II) and in Magna Graecia (LGPN IIIA), in ancient Venusia (modern day Venosa in the province of Potenza), Italy.

'to reject, cast aside'. The primary syllable is ʼnʼ which has a negative force,\textsuperscript{142} but Syr. ʼmanaʼ ‘to bring, lead’, ‘to arrive, come, attain’\textsuperscript{143} The Greek transcription\textsuperscript{144} gives us a rough Aramaic vocalization of the name in which we may notice an /o/ before ʼα, the vowel of /ʼ/, and the usage of ʼθ for the final /t/ indicating the actual pronunciation of /-aṯ/. Line 4. The name of the tribe (ʼl ‘family, tribe’ = Ar. ʼāl), to whom the deceased’s father belonged, is ʼmrt.\textsuperscript{145} It is vocalized by Milik (1958, 245) as ʼāmirat through the Greek Αμιραθου (Wuthnow 1930, 19), and it is the feminine present participle (cf. Ar. ʼumayrah ‘sub-division of a tribe’ < ʼamir ‘a place inhabited, peopled’).\textsuperscript{146} The root comes from the Arabic ‘to build, to live’ (cf. Syr. ‘mar with the same meaning) and it is used as a personal name both in Nabataean and in Safaitic,\textsuperscript{147} it is also the name of a Safaitic tribe from the northern Transjordan desert.\textsuperscript{148} In one of the Nabataean graffiti found in the area of Burqu’\textsuperscript{149} the author describes himself as dy mn ʼl ʼmlt;\textsuperscript{150} as Milik argues (1980, 43), ʼmlt is a phonetic variation of ʼmrt. The Greek part of the inscription does not contain the tribe’s name. The deceased son’s name is ʼšlmn = Gr. Σελαμαν (line 6)\textsuperscript{151} < ʼšlm ‘peace’. Its variations ʼšlmn or ʼšlmh (cf. Ar. salamān)\textsuperscript{152} are well-documented in Petra\textsuperscript{153} and in Hegra\textsuperscript{154} as well as in the Palmyrene\textsuperscript{155} and Hatraean\textsuperscript{156} onomastics.

\textsuperscript{142} Gesenius 1846, 487 = DGes, 699; KAHAL, 306. In JBA, PTA, Gal., Sam. mn ‘bears the meaning of ‘to hold back, stop doing, withhold’ (Jastrow 1903, 801; DNWSI, 661; DJPA, 318b; DJBA, 687b; Tal, Sam, 478).

\textsuperscript{143} Payne Smith 1903, 282; Sokoloff 2009, 784.

\textsuperscript{144} With variations Μοναθος (Wadd. no. 2499) and Μονοαθου (PPAES IIIA, 7 no. 800). Cf. Wuthnow 1930, 78.

\textsuperscript{146} Al-Khraysheh (1986, 143) noted the existence of the name ‘myrt meaning ‘head-gear’, ‘Kopfschmuck’, the diminutive form of ‘mrt.

\textsuperscript{147} Negev 1991, no. 53. See also ICPAN, 436.

\textsuperscript{148} Milik 1958, 245 with references at note 5.

\textsuperscript{149} Macdonald 1993, 359.

\textsuperscript{150} Milik 1980, 42-3, texts nos. 1-2d.

\textsuperscript{151} Pape (1911, 1361) reports the form Σελαμιν attested in Galilee. Further forms are: Σελαμ, Σελαμανους, Σελεμα, Σελημ, Σελμα, Σελμανης and Σελυμαιω (Wuthnow 1930, 107 and 171).

\textsuperscript{152} Pre-Islamic Arabic slmn, Salmān (ICPAN, 326).

\textsuperscript{153} CIS II no. 426.

\textsuperscript{154} CIS II nos. 294, 302; JSNab no. 172.

\textsuperscript{155} PAT, 440 = Stark 1971, 51-2 and 114.

\textsuperscript{156} Beyer 1998, 166.
Line 5. After the mention of the year when the text was carved, i.e. \( \text{bšnt tlt} \) ‘in the third year’, an unusual title appears: \( \text{hprk} \) ‘eparch’,\(^{157}\) instead of \( \text{hprky} \) ‘eparchy’ as written in the Greek part; in fact, in the last line we read \( \text{ἐπαρχεία} \). In the Nabataean epigraphy the term \( \text{hprky} \)\(^{158}\) is quite common; it is a Greek loanword < \( \text{ὑπαρχία} \) = \( \text{ὑπαρχεία} \) ‘province, district’.\(^{159}\) In Nabataean this term is used to mark the territory, in this case that of Bosra, belonging to the \( \text{Provincia Arabia} \).\(^{160}\) The year 3 of the eparchy of Bosra corresponds to 108/109 CE, the later date of the era of the City.\(^{161}\)

Lines 6-7. The Greek section of the inscription starts by mentioning the deceased’s name \( \text{Σελαμαν} \) followed by \( \text{χρηστέ} \) ‘good’ that is usually used in the inscriptions along with \( \text{χαίρειν} \), as in our case: \( \text{ἄλυπε} \) ‘without pain’ and \( \text{χαίρε} \) ‘hi!’.

Lines 8-9. We find the adjective \( \text{τειμίῳ} \) < \( \text{τίμιος} \) ‘well-loved, honoured’ referred to the dead son and in line 8 the substantive \( \text{τὸ μνῆμα} \) ‘burial monument, gravestone, memory’.

12. The inscription is carved on a basalt within a \( \text{tabula biansata} \) that is broken into two parts. The fragment on the left side appears to be worn out and some letters are no longer legible. The epigraph is entirely written in Greek and, according to the first editors, only at the end are we able to distinguish any signs in the Nabataean script.

Commentary

The author’s name is identified, in the editio princeps, as Αβδαλλα and his patronymic corresponds to a supposed Σανα. However, it would seem more plausible to accept the hypothesis proposed by Clermont-Ganneau (1898a, 12) who simply reads Αβδαλλας Ανα[μ] ou as ‘Abdallas son of Anamos’.

As regards the author’s name, it is a theophoric (= Nab. ‘bd’lhy) attested in Greek and in Nabataean epigraphy, as well as his patronymic Ανομος (= Nab. ‘nmw). The latter seems to originate from the Arabic γānim ‘qui fait du butin qui réussit sans effort’, in Saf. ‘nm and Palm. ‘nmw ‘successful, noble’ (< Ar. ‘to loot, to pillage’, ‘to rob’).

In line 6, after καταστάσεως, according to the epigraphic usage, we should read the noun τῆς πόλεως, in place of the name of the city, that fills the blanks before Αντωνείν[ου].

Lines 6-7 provide two important historical references in order to date the inscription; in fact, there is the name of Antoninus (probably the Roman Emperor Antoninus Pius) and the year of his reign, that is XIX corresponding to 157 CE, probably the year in which the inscription was composed. In line 5 we find two further dates, but the first is only visible in the horizontal line above the letters, while

162 Germer-Durand 1895, 90.
163 For Nabataean see Cantineau 1930-32, 2: 126; for the Greek form Αβδαλλας cf. PPAES IIIA no. 144 (it is attested in Hauran), Negev 1991, no. 793 and Wuthnow 1930, 7 and 153 in which the form Αβδαλλας is recorded. Whereas Αβδαλλα is present in Sinai in the Wādī Haggag (see Negev 1977, no. 42).
164 Cf. Cantineau 1930-32, 2: 133-4. In Greek we find forms like Αναμος (Negev 1991, no. 924), Ανεμος (Wadd. no. 2053; Wuthnow 1930, 22), Ανναμος, Ανμος, Ωνεμος (Wuthnow 1930, 23, 121, 159).
165 Cantineau 1930-32, 2: 134.
166 PAT, 438 = Stark 1971, 45 and 106.
167 Clermont-Ganneau 1898a, 13. It is probable that the Σ at the end of the lacuna, linked to the A, truly represents the genitive ending of πόλεως.
168 Antoninus Pius was Emperor from 138 to 161 CE.
the second, which is 340, coming after καταστάσεως, indicates the year of the building of the city.

At the end of the last line Germer-Durand recognized some Nabataean characters identifying them as a consonantal sequence such as mnbrk'. For Clermont-Ganneau (1898a, 13) it may be the name of the city of Madaba either in the Biblical form of mydb' (= Heb. mèdəbā') or, according to the original Moabitic diction, mhdb' which occurs in the stele of Mesha.170

Zīzah (Zuwaiza), East of Madaba

13. This epigraph was found during the excavations about 250 metres south-east of Qala’at Zīzah probably near the ruins of an ancient church.171

In the inscription, which is engraved on a limestone, the bilingual texts are written on two parallel columns. The stone presents an oblique incision on the base that belonged to another stone. The stone was most likely worked to be embedded in the floor.172 The two texts are separated by a little central space of about 8 cm. The Nabataean inscription is shorter and more damaged than the Greek and only 12 lines can now be read, though the whole text must have been longer.

Dimensions length 70 cm; height of the bigger side on the right 36 cm; height of the smaller side 23 cm; thickness 15 cm

Dating beginning of the 2nd c. CE (?)

Bibliography RES no. 1284; Jaussen, Savignac 1909, 587-92; JSNaB nos. 392 and 21, tab. 71; IGLS 21,2 no. 154; Quellen, 213-5

Commentary

The beginning of the epigraph may be completed by the expression: ‘This is the temple of Baal of (Mount) Pegor’ in order to recall the lines 10-11 of the Greek section. In line 3 the author’s name, dms, is of Greek origin and it helps us to reconstruct the name [Δημ]ας occurring in line 6. Macdonald (1999, 274) suggests a cross reference to Safaitic dms, dmṣ, proposed by Winnett (1973, 54). If this hypothesis is right, Safaitic dms may represent the Greek name Δημᾶς-Δαμᾶς as Nabataean dms and forms with nisbah may reproduce the hypocoristic of Δαμάσιππος. This

174 Such a reconstruction is found in Quellen, 214: “Dies ist der Tempel des Baal vom (Berg) Pegor”.

175 Pre-Islamic Arabic dms’ < damīs or also dms ‘to hasten’ (ICPAN, 243). He wonders whether in north Arabia a tribe named Damaṣi truly existed. The assumption of Macdonald replaces that of Negev (1991, no. 278), who believes that the forms dms/dmṣy are identical and there is a link with Arabic damīs ‘hidden, concealed’. Cf. also Wuthnow 1930, 43. In Nabataean this name is present in JSNab no. 392 (cf. Cantineau 1930-32, 2: 83 as well). It is also recorded in Palmyrene (PAT, 433 = Stark 1971, 43 and 135) in which the form Δαμᾶς appears.

176 Cf. Milik, Starcky 1970, 142. This kind of hypocoristic is found at al-Ḥiǧr in the shape of dmsps (cf. al-Khraysheh 1986, 60) Greek Δαμάσιππος (Pape 1911, 267).
name has Greek origins and its meaning refers to the form Δημέας that Pape (1911, 288) identifies with ‘Volkmann’ or ‘Dörfler’, a clear connection with the people (< Gr. δῆμος).  

The father’s name is ἡλλ (= Gr. Ελλην[ός] in line 6). If the reading is right, it represents the Biblical name hillēl (Judg 12,13), the father of Abdon the Pirathonite, whose root hill means ‘to be clear, bright’, also ‘to praise, to glory, to celebrate’ in pi‘el form.

Line 4. The ethnic ‘mny’ is omitted in the Greek part. It deals with an adjective referred to ‘Amman, Ammanite’, the place of birth of the author’s grandfather. In the Nabataean section, Amman is presumably used to indicate the name of the god Ba‘al that should appear in line 1, according to the reconstruction.

Line 5. The reading is uncertain, but we find the title, probably bestowed on Demas, mr byt, that means ‘Lord of the Temple’. If the reading is right, successively we may read a probable ‘tr, as this is the ‘Lord of the Temple of the place’.

Line 6. The Greek part of the inscription begins by quoting the author’s name and his father’s name. The reading Δημᾶς is prompted by the Nabataean text since here we may only trace the middle

---

177  dyms is a loanword in Nabataean assuming the meaning of ‘people’, as well as in Pal., Sam. and Syr. (DNWSI, 253).

179  In Biblical Hebrew ‘Abədōn, in Greek Ἀβδών, he was the twelfth Judge of Israel.

180  Gesenius (1846, 226) interprets: “used of a clear, sharp tone or sound” and reports that in Ethiopia the women, during the public rejoicing, have the habit of reproducing the sound ellellellel. Cf. MDGes, 278-9 and KAHAL, 129-30 ‘rühmen, Gott preisen’. Indeed in Ge‘ez we find tahala ‘jubilating, utter cries of joy’. The Hebrew root is connected with Arabic hallala (< halla ‘to appear, to begin’, also ‘to pour down [the rain], to peal’, therefore ‘to make noise’) that means ‘to praise God, to shout for joy, to rejoice’ (also Akk. alālu, elēlu ‘to sing a joyful song, boast, exult, celebrate’. Cf. AHw I, 34 and 197; CAD I, 331 and ff.; CAD IV, 48, 80 and ff. and Klein 1987, 152). In the Aramaic of Qumran, CPA, Sam., Man. hil, Syr. hallel has the same meaning of ‘to pray’ (Jastrow 1903, 353; Sokoloff 2009, 344; Tal, Sam, 210).

181  Quellen, 214.

182  This expression is used in the shape of mr’ byt’ in RES nos. 1088, 1111; CIS II nos. 235a, 235b; JSNab no. 58; Quellen, 269-72 with commentary. It is transcribed as mr byt’ in JSNab no. 59, RES no. 1284; while mr byt in JSNab no. 392. Nöldeke (1909, 184-5) argued that, with reference to the inscription in RES no. 1088, mr’ byt’ was to be identified with rabb al-bayt which is recorded in the Koran (CVI, 3). In the Nabataean epigraphy the connection of the title mr byt to the deity of al-‘Uzzā comes from an inscription from the Wādī Rām (Savignac 1933, 413-5, no. 4), which is engraved on the left of a niche along the road from Jabal al-Kubţā to Petra (Dalman, 2: no. 46, fig. 42) and in an inscription from Hegra (Nehmé 2005-06, 189-94, no. 12, fig. 134).

183  In fact, in mr all the base of the Nabataean m was lost and we may only reconstruct the substantive.

184  Quellen, 214.
line of the A and of the M. On the contrary, Ἐλληνὸς is more legible.

Line 7. At the beginning we read -AMOY\(^\text{185}\) and, on the basis of the following μηνός, we may reconstruct the name of the Greek month Πάνημος.

Lines 9-10. Here we may see the Greek equivalent of the dedication to Zeus (= Διός), the god who ‘is’ in Belfagor, as expressed in line 10: οὖ ἐν Βεελφεγώρ. He is a middle eastern deity worshipped by the Moabites; in Hebrew baʿal-pəʿôr ‘The Lord of mount Peor.\(^\text{186}\) With the arrival of Greek culture in the Moab region, Baʿal would become God/Zeus worshipped in other places in the same way.\(^\text{187}\)

Jerash

14. This epigraph is engraved on a red dolomitic limestone (in Arabic Mizzi  sprzedaż),\(^\text{188}\) found in May 1931 in the ancient town of Jerash,\(^\text{189}\) 48 kilometres north of the capital Amman.

The left part of the inscription is ruined by a vertical incision that partially splits the stone into two parts. So, it is hard to read the fragment because the beginning and the end of the stone were lost.

The first who studied this inscription was Father Luis-Hugues Vincent (1872-1960), from École Biblique et Archéologique Française of Jerusalem in collaboration with his colleague Father A.J. Savignac (1871-1962). Father Vincent gave his contribution to the analysis of the Nabataean text as Kraeling reports (1938, 371). (Plate IV, no. 1)

\(^{185}\) On the contrary, the first editors read -[NE]MOY. Cf. Jaussen, Savignac 1909, 589.

\(^{186}\) The Bible narrates the event in which the Israelites yoked themselves to the Baʿal of Peor triggering the Lord’s anger against them (Num 25,3).

\(^{187}\) Jaussen, Savignac 1909, 589.

\(^{188}\) It is common in and around Jerusalem where it has been used in buildings since ancient times. In particular, it was used for ablaq-style multi-colored masonry.

\(^{189}\) The town is located along the banks of the Wâdî Ġarāš river, an affluent of the Zarqā’ river. The first settlement of some importance is that of the Greeks after the conquest of Alexander the Great, presumably around 331 BCE. However, Jerash only became really important after the Roman conquest in 63 BCE and it was annexed to the Roman province of Syria; in addition, it joined the Decapolis league of cities. During the following two centuries, Jerash conducted business with the Nabataeans and, thanks to the gains of trade and the wealth obtained through agriculture, it became rich and flourishing. Jerash achieved the peak of prosperity in the 3rd century, but the Persian invasion in 614 CE and that of the Arabs in 636 led to its rapid decline. Moreover, in 749 CE a major earthquake destroyed much of Jerash and its surroundings and its population decreased.

Commentary

In the Greek section, the first four lines carry only some final letters; in lines 5 and 6 we read εις δυσμας, referring to a direction towards the west, and in the following line εις νοτον, in this case indicating a direction towards the south.
The reading of line 7 is rather difficult. On the basis of the facsimile, which was presented by Father Vincent, Kraeling thought the text could be reconstructed as τῶν μερῶν. Subsequently, in a further revision, Quellen reads ΙΩΝΜΕΙΩΝ not providing a translation.

In line 8 we probably read ταῖς ἐπάλξεις which is a possible reference to the protective walls (< ἡ ἐπάλξις ‘means of defence, parapet, shelter’). The possible combinations on the basis of which a new sentence might be read from this are innumerable.

In line 12 the name ḥṛt t ‘Aretas’ occurs, which is probably a reference to the king Aretas IV.

In line 15 the name ῥβ’l appears, probably referring to the last king of the Nabataeans Rabbel II (70-106 CE). The presence of the latter would corroborate Milik’s reading of line 16. Indeed, he reconstructs the sentence ‘šryn ḡd bsyn ṣnt ‘šr ḡd[h] ‘21 of Siwan of the year 11’ of Rabbel II’s reign that corresponds to June 81 CE; presumably this indicates the date of the erection of the stele.

The fact that Jerash is the subject of a new state-building plan, after the erection of Zeus’s temple in 69 CE, may confirm what has already been mentioned above. The terminus ante quem of the urban renovation project is established by an inscription, found in the northwest walls of Jerash, in which we read the name of the Syrian governor Lucius Ceionius Commodus who served as consul from 78 until 81 CE. Between 69 and 80 CE the urban renovation project was completed and huge defensive walls were erected. If the reading ἐπάλξεις (line 8) is right, the two directions ‘west’ and ‘south’ (lines 5-6) may refer to the boundaries of a plot of land that is ad-

191 LSJ, 606.
192 According to the palaeography of the text, the predecessors Aretas I and Aretas II (169-96 BCE) are earlier, while Aretas IV (9 BC-40 CE) would be more appropriate for our inscription.
193 Kraeling 1938, 375-6, no. 5.
194 Kraeling 1938, 397-8, no. 50. Commodus was the first of the gens Ceonia to become a consul.
Jacent to the walls of the city. There might be a coincidence between the year of Rabbel II’s reign and the building of the walls of the city and therefore we can date this inscription to the period between 80 and 81 CE.

Umm al-Jimāl

15. The two inscriptions are written in an altar that was found on the ground of the courtyard of the so-called ‘House no. VI’ in the eastern part of Umm al-Jimāl, a village about 17 kilometres away from Mafraq in northern Jordan. The column represents a gift to the local deity Dūšarā-A’ara.

As regards the Nabataean text, the shape of the letters could date the engraving of the altar to the 1st or the 2nd century CE, as the editors point out. (Plate IV, nos. 2-3)

Dimensions  height 140 cm; height of head and base 22 cm and 37.5 cm; height of Nabataean letters 6-13 cm; height of Greek letters 6-10 cm

197 Umm al-Jimāl rose in the 1st century CE as a rural suburb of the ancient Nabataean capital of Bosra. The Nabataeans are considered to be the first to build permanent homesteads in the area creating a settlement in which there was mainly a farming community and a trading outpost dependent on Bosra. Cf. De Vries 1998.
Commentary

The Nabataean noun *mšgd’* or *mśgd’t*, absent in the Greek section, pinpoints the object dedicated to a deity that is a stone idol-altar.\(^\text{198}\)

The name is presumably a loanword or an interference from Arabic into Nabataean\(^\text{199}\) < *Ar. saǧada* ‘to bend until you touch the ground by your forehead in act of worship’.\(^\text{200}\)

In line 3 of the Nabataean text we find the name *mškw* or *mśkw* corresponding to Greek Μασεχος in lines 1-2. It is a common name that occurs in the Nabataean and Greek inscriptions from Central Syria and Mount Sinai.\(^\text{201}\)

The Greek Μασεχος is also found in the form of Μασαχος.\(^\text{202}\) It is the abbreviation of a theophoric name, *mšk’l*.\(^\text{203}\) This compound form is recorded in Safaitic *msk’l* and occurs as Μασαχηλω in a Greek inscription from Sī’ as well;\(^\text{204}\) its meaning is ‘(god) has taken possession’\(^\text{205}\) and it is a birth name that represents the cultural uniformity of the Syrian regions of Hauran and Ḥarrā.\(^\text{206}\)

In lines 4-5 the name ‘wyd’, corresponding to Greek Αουειδανου,\(^\text{207}\) appears. The insertion of the ν as a suffix is vague and probably

---

\(^\text{198}\) This noun, which is formed by the prefix *m* indicating the place, is used in Official Aramaic meaning ‘place of adoration’, ‘object serving as a permanent sign of adoration of the god to whom it is dedicated’, as a monument or an altar dedicated to a god in order to recognise the gratitude for a favour or to obtain one. \(^\text{207}\) At Umm al-Jimāl there is an epitaph dedicated to a son of Αιουδαινου (*IGLS* 21,5.1 no. 512).
\textit{Αουειδανος} is simply an extended form of the name \textit{Αουειδος},\textsuperscript{208} used in Arabic as ‘\textit{Awīḏ}.\textsuperscript{209} Therefore, ‘\textit{Awīḏā} should be the diminutive form of a Sinaitic name, more precisely ‘\textit{wdw = Αωδος}, hence the corresponding Arabic root ‘\textit{ūḏ}.\textsuperscript{210} The Arabic verb ‘\textit{āḍa} means ‘to take refuge, to take cover’.\textsuperscript{211}

The last two lines 5-6 show the name \textit{dwšr'}, equivalent to Greek \textit{Δουσαρει}. This is the main deity of the Nabataean pantheon, worshipped above all at Petra, Mada’in Saleh, and Bosra. The name \textit{Dūšarā} deserves a brief analysis: does it concern the deity’s name or is it simply a god’s epithet? From a strictly linguistic point of view, the appellative, in Arabic \textit{غُل l-šarā}, means ‘who (the owner, the Lord) of al-Šarā’ referring to the mountain range located near Petra;\textsuperscript{212} it is a ‘sacred’ mountain range that, during the \textit{jāhiliyya}, was considered \textit{haram} ‘prohibited’ or \textit{hima} ‘protected’; the latter is interpreted as a place protecting animals, plants and fugitives.\textsuperscript{213} Actually, the substantive \textit{šarā} also has the meaning of ‘road, tract of land, mountain’\textsuperscript{214} and sometimes it is employed in the context of ‘sacred land’.

As a result of the Nabataean cultural expansion, the cult of Dūšarā spread along the Mediterranean Sea and therefore Greek and Latin authors mention this deity in the form of \textit{Δουσάρης} and \textit{Dusares}.\textsuperscript{215} Following the Roman conquest, Dūšarā continued to represent the main deity of the capital Bosra.

Starting from the middle of the 3rd century, four-year-games in honour of Dūšarā were established at Bosra, as can be seen from imperial medals bearing the legend \textit{ACTIA DUSARIA}, along with the representation of a hand press.\textsuperscript{216}

A temple dedicated to Dusares was found in Italy, at Pozzuoli, since the ancient Puteoli traded with the Near East; the Nabataean pres-

\textsuperscript{208} It is present at Umm al-Jimāl in \textit{IGLS} 21.5.1 nos. 203, 204, 206, 243. In the shape of \textit{Αουηδης}, in \textit{IGLS} 21.5.1 no. 205, \textit{PPAES} IIIA no. 288. In addition, a certain \textit{Μασεχος}, son of \textit{Αουειδου}, always appears at Umm al-Jimāl in \textit{PPAES} IIIA no. 271.

\textsuperscript{209} \textit{PPAES} IIIA no. 138.

\textsuperscript{210} Blau 1862, 380. In pre-Islamic Arabic ‘\textit{wd} ‘return’ (\textit{ICPAN}, 447). The forms ‘\textit{wyd}’ and ‘\textit{wydw}’ (Beyer 1998, 164) are recorded in Hatraean as well as in Palmyrene (\textit{PAT}, 438 = Stark 1971, 44 and 104-5).

\textsuperscript{214} Lane, 1545.

\textsuperscript{215} This Nabataean deity is quoted in the 9th century by the Arabic historian Hiṣam Ibn al-Kalbi in his \textit{Kitāb al-Aṣnām}: “The Banū al-Hārith ibn-Yashkur ibn-Mubashshir of the ‘Azd had an idol called Dū Sharā” (1952, 33); cf. also Healey 2001, 87.

\textsuperscript{216} \textit{VIS} no. 120. Cf. also Stockton 1971, 52.
ence is attested starting from the middle of the 1st century BCE.\footnote{Museo archeologico dei Campi Flegrei 2008, 60-3. Cf. Lacerenza 1988-89 and CIS II no. 157.}

In the last line of the Greek text there is the name $\text{Ααρρα}$, not present in the Nabataean part of the inscription. We are dealing with a socio-religious name of considerable importance that identifies the deity ‘$r$’ worshipped at Bosra and associated with Dūšārā, as we can see in two inscriptions found at Bosra and Imtān.\footnote{Cf. those inscriptions in Savignac, Abel 1905, 592 and ESE I, 330.} The inscription coming from Imtān and dating to 93 CE describes Dūšārā, who is assimilated to the local deity Ā'arā. It is worth bearing in mind that Dūšārā always had a significant influence on the Nabataean royal house as is shown, for instance, in a legend depicted on a silver coin of king Obodas III, dated to 16 CE.\footnote{Teixidor 1977, 85.} The transfer of the cult of Dūšārā and contextually the shift of the capital from Petra to Bosra under king Rabbel II (71-106 CE) are further proofs that corroborate the previous assumption.\footnote{Dijkstra 1995, 312.} As a matter of fact, the king established closer relations between Bosra and Dūšārā assimilating the latter to the local deity Ā'arā.\footnote{In the inscription from Imtān we read, lines 5-11: “Dūšārā and Ā'arā God of our Lord who is at Bosra. In the year 23 of Rabēl the king, the king of the Nabataeans”. Cf. editio princeps in VAS, 169 no. 36.} In addition, Rabbel II yearned to make Dūšārā the Nabataean national god, his own god and that of his city.\footnote{Particularly, Dussaud and Macler (VAS, 169-70) proposed associating ‘$r$’ with Hebrew ēser ‘treasure’ (the transition /$r$/ > /$s$/ is common between Aramaic and Hebrew. Cf. Aram. ‘$r$’ > Heb. ēres ‘earth’), who was the biblical son of Se’ir, in Gen 36,21-30. This latter was a personification of the mountainous region that extends from the Dead Sea to the Red Sea, a territory inhabited by the Nabataeans. In contrast, Lidzbarski (ESE I, 330) initially interpreted the term as the equivalent of Latin abundantia, that is ops, but without philological explanations. At a later stage, he abandoned his first hypothesis proposing to relate Ā’arā to Hebrew $\text{רְשָׁע}$ = Ar. $\text{רְעַן}$, rather than Safaitic $\text{رصد}$ (ESE II, 93). Clermont-Ganneau (1898c, 374) speculated that Ā’arā was the specific name of a god and in particular the form $O^\prime\text{ro}$ corresponds to the first element of the ancient Arabic deity $\text{عَرَّالی}$ mentioned by Herodotus (Historiae 3.8).}

The inscription coming from Imtān and dating to 93 CE describes Dūšārā, who is assimilated to the local deity Ā'arā. It is worth bearing in mind that Dūšārā always had a significant influence on the Nabataean royal house as is shown, for instance, in a legend depicted on a silver coin of king Obodas III, dated to 16 CE.\footnote{Museo archeologico dei Campi Flegrei 2008, 60-3. Cf. Lacerenza 1988-89 and CIS II no. 157.} The transfer of the cult of Dūšārā and contextually the shift of the capital from Petra to Bosra under king Rabbel II (71-106 CE) are further proofs that corroborate the previous assumption.\footnote{Cf. those inscriptions in Savignac, Abel 1905, 592 and ESE I, 330.} As a matter of fact, the king established closer relations between Bosra and Dūšārā assimilating the latter to the local deity Ā'arā.\footnote{Healey 2001, 154.} In addition, Rabbel II yearned to make Dūšārā the Nabataean national god, his own god and that of his city.\footnote{Dijkstra 1995, 312.}

The present inscription provides the first Greek transcription of the whole name of Dūšārā with the addition of ‘$r$’ = $\text{Ααρρα}$. As regards its etymology various editors have proposed different theories about its meaning.\footnote{In the inscription from Imtān we read, lines 5-11: “Dūšārā and Ā'arā God of our Lord who is at Bosra. In the year 23 of Rabēl the king, the king of the Nabataeans”. Cf. editio princeps in VAS, 169 no. 36.}

Littman’s thesis (PPAES IVA, 35) seems to be particularly reasonable; he asserted that Ā’arā derives from Arabic ġarā meaning ‘good,
beautiful’,224 ‘beau, joli, bon’,225 from which, in turn, the name of a stone idol al-ġariyyu derives, under which Dūšarā was worshipped at Petra.226 In fact, as recorded in the Byzantine encyclopedia Suda, Dūšarā (with the title of Θεός Ἀρής) was worshipped in the shape of a rectangular, rough black stone onto which the blood of the sacrificed animals was poured.227

The Greek form would be Αρρα(ς)228 probably identified with Ares, the God of war. This theory may well be supported if the hypothesis, according to which the deity’s name derives from the Arabic af’al form ġry > aġrā ‘dyeing’ or ‘anointing’,229 is true. In fact, al-ġariyyu < ġry, as stated above, is the name of a stone idol, worshipped by the pagan Arabs and stained or better dyed by the blood of the sacrificed animals; one of its derivatives, ġariā, identifies ‘a certain red dye’.230 This is the reason why the connection with the Greek God Ares, the god of war who ‘stains himself by blood’, would be appropriate both phonologically and culturally.231

16. The two inscriptions were found separately. The stone on which the Nabataean text occurs was situated in the wall of a house near the central church of Umm al-Jimāl, whereas the Greek part was uncovered in a courtyard not too far from the same church. Although the epigraphs are inscribed on two different stones, they bear the same content. (Plate V, no. 1)

Commentary

The Nabataean script seems to be at a transitional stage towards the Arabic script. Indeed we may notice a tendency towards ligature, although the $š$ in line 1 is not attached to the preceding $p$ and the $y$ in $gdymt$, in line 2, is not linked to the following $m$. Moreover, we may observe that the $g$ has already assumed a similar form encountered in the Kufic script. Littmann (PPAES IVA, 38) suggested that the writer was an Arab who knew Nabataean as an archaic literary language since he used the final -$w$ in common names, as we may see in $npśw$ for $npš$, line 1, and $rbw$ for $rb$.

The tomb is dedicated to a certain $phrw$ = Gr. $Φερου$; his father’s name is $šly$, well-documented in other inscriptions. In this case the Greek transliteration $Σολλεους$ does not correspond to the well-known $Συλλαιος$, who was the minister of the Nabataean king Obodas III, also recurring in the inscription from Miletus (no. 49). It might be a solecism, even if it is recorded elsewhere.

---

233 Littmann 1909, 387. This inscription, along with that of Mar’al-Qays of al-Namāra (Louvre Museum, AO 4083; RES no. 483) dating to 328 CE, represents an important document of pre-Islamic history.

234 The tendency to separate the letters is probably due to the usus of the monumental inscriptions.

235 PPAES IVA, 38.

236 Cf. al-Khraysheh 1986, 151-2 for references; Negev 1991, no. 956, probably from Arabic $fihr$ (ICPAN, 473). Cantineau (1930-32, 2: 136) translated it as ‘pilon en pierre’. In Arabic it is a personal and tribal name, in fact $Fihr$ is remembered as the direct descendant of ‘Isma’îl and as another name of the Qurayš tribe.

238 In an inscription from Be’er Ševa’ (Abel 1903, 428, no. 6), while the form $Σολλεους$ in Wadd. no. 1989, PPAES IIIA nos. 158 (= Wadd. no. 2003), 212 = Ar. Sulaih. Cf. Wuth-
The most important character is Gaḏīmaṯ, the king of the Tanūḫ (gdymt239 mlk tnwḥ = Gr. Γαδιμαθου240 βασιλεύς Θανουμων). He was a sovereign, documented in the Islamic historiography, who reigned between the Euphrates and Syria as chief of the Tanūḫ tribe in the second half of the 3rd century CE (around 275 CE).241 As a consequence the stele should be dated to the end of the century.242

In the Greek text we read τροφεύς, a term wrongly inflected in the nominative along with βασιλεύς, whereas a genitive is to be expected; this refers to a title granted to Fehrō. In the Nabataean section τροφεύς is rendered as rb, translated by Littmann (1909, 387) as ‘Erziehers’, rather than ‘tutor’ (PPAES IVA, 38), giving it the significance of ‘educator’, ‘rabi’, or better ‘mentor’. Although the first meaning of τροφεύς is ‘one who brings up, foster-father’,243 we do not exclude that it indicates the role of ‘educator, instructor, teacher’. Sartre (1979, 253-8) thought that it was a late title conferred on members of the court of the Hellenistic kings, such as that of Seleucides or Ptolemies. To his mind, we are dealing with a parental title of Seleucid influence; as Strabo also wrote (15.4.21), in the Nabataean kingdom there was a king who called ἀδελφός ‘brother’ his administrator – ἐπίτροπος. In the bilingual inscription of Miletus, the minister presents himself as a ἀδελφός βασιλέως, as reported in the Aramaic version ḥ malk and not rb.244 Therefore, the τροφεύς, instead of σύντροφος ‘foster-brother’, is to be interpreted as ‘père nourricier’ (= θρεπτήρ), ‘putative-father’, as Sartre pointed out.245 Jeanne and Louis Robert rejected Sartre’s hypothesis without adding a plausible explanation of the term. So, it would appear to be a title linked to a specific task within the royal court, such as that of the tutor.

239 al-Khraysheh 1986, 53-4; Negev 1991, nos. 216, 217; Cantineau 1930-32, 2: 77 = Ar. ǧaḏimah. It means ‘cut off, amputated’ < ǧadama ‘to cut off’ (Lane, 398), Syr. gdam and Man. gdm; Akk. gadāmu ‘to cut off hair’ < Pro. Afro-As. *gad- ‘cut, split’ (Sokoloff 2009, 206; CAD V, 8; AHw I, 273; HSED no. 868). Cf. also Ge’ez gadāmit ‘that which cuts, scissors’ (Leslau 1991, 182-3).

240 Wuthnow 1930, 38 and 133.

241 In the Arabic historiography he is mentioned by al-Ṭabarī, Kitāb aḥbār al-rusūl wa al-mulāk, 2: 744-61; Perlmann 1987, 128-43. According to the tradition, ḫaḏimat al-Abraš was one of the first kings of al-Ḥīrah, an enemy of queen Zenobia (Zabbā’) of Palmyre by whom he was killed (cf. al-Mas’ūdī, Murūj al-ḏahab wa maʿādin al-jawhar, 222 and ff.; Ibn Qutayba, Kitāb al-maʿārif, 216 and ff.).

246 Mascitelli 2006b, 232.

Finally, the Greek translation of the Aramaic term ηπς with στήλη should be considered. It is worth remembering that the old Nabataean city of Umm al-Jimāl was rebuilt by Christians, as Littmann asserted (PPAES IVA, 40), who looted the ancient tombs in order to erect stone buildings; once the stelae were extracted from the ground, they were used as shelves or steps of staircases. With reference to the Greek inscription it would be difficult to establish whether it is a stone employed as a stela or a lintel. The Nabataean word npś could refer to both a stele and a tomb, meaning that we are dealing with a rare case in which στήλη identifies a burial, a tomb.

**Umm al-Quṭṭayn**

17. The epigraph was found at Umm al-Quṭṭayn, about 12 km east of Ṣabḥa on the north border with Syria. The inscription is engraved on a basalt, to be more precise on a grayish slab, broken on the right side where the text is almost illegible. The bottom of the stone is not entirely inscribed.

**Dimensions** height 123 cm, length 33 cm, thickness 14 cm; height of letters 9-10 cm

**Dating** last period of Roman Empire (4th-beginning of the 5th c. CE?)

**Bibliography** MacAdam, Graf 1989, 191, no. 3; SEG 39 no. 1610; IGLS 21,5.1 no. 724

**Text and translation**

1) [---t] br m[---]
2) εαθ[---]
3) ηετ[---]
4) λ

1) [---] son of [---]
2) -
3) ag[e ---]
4) 30

---

248 It is an important site in the Hauran. Its ruins show a settlement dating to a period between the Bronze Age and the times of the Ottoman Empire, although its most prosperous period was during the Byzantine era. For a brief history of the village cf. *IGLS* 21,5 no. 319 with a comprehensive bibliography.

249 MacAdam, Graf 1989, 191.
Commentary

The legible part of the text consists of four lines. In line 1 there are letters in the Nabataean script representing two names: the first is illegible, except for the final -t, and the second contains an initial m-. The only recognizable term is br.

In line 2 the Greek letters are clear, but unfortunately the remaining part of the inscription does not permit us to identify the name of the deceased. A distinct sequence of characters, such as -εαθ- and Εαθ- can be observed.

In line 4 we may reconstruct the age of the deceased: η ἔτ(ῶν) λ, ‘30 years old’.

After a further analysis of the photograph of the stone, provided by MacAdam, Bader believes that the inscription is totally written in Greek and the rebuttable Nabataean signs are barely more than the initials of the deceased’s name. In O followed after a space by M, in order to render the feminine name Ομεαθη, attested in the region of Umm al-Quṭṭayn. According to the facsimile in the editio princeps the inscription would not seem to be bilingual, but after a careful analysis we may distinguish a t, at the beginning of line 1, followed by signs that resemble br, and at the end of the line a round drawing that looks like a final m.

In a space into which three or more characters may fit, the presence of a single Ο followed by a M (after a space) seems to be improbable.

The palaeography would date the inscription to the end of the 4th century or to the beginning of the 5th c. CE.

250 IGLS 21,5.1 no. 330.
251 In IGLS 21,5.1 no. 669, the inscription was not found and we may only resort to the drawing; in IGLS 21,5.1 no. 717 a masculine form Ομεθου occurs with a doubtful μ; in IGLS 21,5.1 no. 725 the name is not totally legible, in fact we can only make out ομε- (in line 1) and θεγυ (in line 2) that leave open the possibilities of interpretations.
252 Bader (IGLS 21,5.1: 330) points out that: “Ce qui a été pris pour du nabatéen se lit d’abord comme un Ο puis, après un espace, un Μ”.
